

Hesara Dilnath

Undergraduate

Professional Summary

Motivated and enthusiastic Computer Science student with a strong foundation in web development, programming, and data science. Familiar with HTML, CSS, PHP, Java, Python, R, SQL, and data analysis techniques. Passionate about learning new technologies and applying problem-solving skills to develop efficient software solutions. A quick learner with strong analytical, communication, and teamwork abilities, eager to contribute to innovative projects while gaining valuable industry experience.

Phone: +94 761723002

Education

University of Plymouth (2024-Present)

BSc (Hons) Data Science

Certifications

Introduction to Career Skills in Data Analytics (*LinkedIn Learning*)

Microsoft Azure Essentials by Microsoft Press (*LinkedIn Learning*)

Advanced Python: Top Tools for Data Science and Engineering (*LinkedIn Learning*)

Hands-On Data Analysis with ChatGPT-5 (*LinkedIn Learning*)

Predictive Analytics Essential Training: Data Mining (*LinkedIn Learning*)

Projects

Book Recommendation System (Machine Learning)

Developed a machine learning-based book recommendation system using Python, Pandas, and Scikit-learn to provide personalized book suggestions by analysing user preferences and historical rating data, applying data preprocessing and similarity-based recommendation techniques to improve accuracy, and built a Flask web application that delivers real-time recommendations through a simple and interactive user interface.

Point of Sale (POS) Management System

Developed a multi-user POS management system using C#, WinForms, and SQL Server to handle retail operations efficiently, implemented core features including inventory management, sales tracking, barcode scanning, and reporting, and integrated database operations with full CRUD functionality to ensure accurate, reliable, and structured data management.

E-Commerce Clothing Store Website

Designed and developed a responsive e-commerce website using HTML, CSS, PHP, and MySQL to enable seamless online shopping functionality, built a user-friendly interface with product browsing and management features, and enhanced overall user experience through responsive design and interactive web components for improved accessibility across devices.

Retail Store Data Analytics Project

Performed data analysis on retail sales data using R programming to identify key trends in sales performance, profit patterns, and customer behaviour by exploring and processing the dataset, and generated meaningful insights and visualizations to support data-driven decision-making and business understanding.

Utility Management System

Developed a web-based utility management system using PHP, MySQL, HTML, CSS, and JavaScript to streamline utility operations, implemented role-based dashboards for customers, cashiers, and administrative staff, and included features such as billing management, user management, and automated report generation with integrated email and PDF generation for invoices and notifications.

AI-Based Library Chatbot

Developed an AI-powered chatbot for a library system to assist users with book searches and general queries, implemented natural language processing techniques to understand user inputs and provide relevant and accurate responses, and improved overall user experience by enabling fast, interactive, and efficient access to library information through an intelligent conversational interface.

Heart Disease Prediction and Analysis Using Machine Learning

Built a heart disease prediction system in Python using Logistic Regression and Random Forest models. Conducted data preprocessing, EDA, model evaluation, cross-validation, and SHAP-based feature interpretation to deliver accurate and explainable predictions.

Social Media Sentiment Analysis System

Developed a sentiment analysis system to classify social media or product reviews as positive, negative, or neutral using Python and Natural Language Processing (NLP) techniques. Processed and cleaned textual data, applied feature extraction methods like TF-IDF, and built a machine learning model to analyse user opinions and generate meaningful insights from text data.

Online Retail Performance Analysis

Conducted an in-depth analysis of online retail sales data to evaluate business performance, including revenue trends, product category performance, and customer purchasing behaviour. Used Python, Pandas, and data visualization tools to clean, process, and analyse large datasets, generating actionable insights to support strategic business decisions and improve sales performance.

Extra-Curricular activities

Sports

Competed in the **Under-19 Zonal Level Athletics Championship**, participating in sprint events (100m, 200m, 400m) and long jump, showcasing competitive athletic ability and discipline.
